Battery backup system

Jun 30, 2008 9:01 AM

The PowerTower enables renewable energy installers and users to integrate battery backup power into their distributed PV or wind turbine installation. Safety certified to UL standards, the company says the system is emissions-free, virtually silent, and can be installed indoors. Rated from 4.5kW to 30kW of continuous power output, the system is configured for 120/240V output. In addition, the product is designed to add battery modules to provide energy for as long as needed.
